

CLAIM AMENDMENTS

Claims 3, 5 through 10, and 15 through 32 are pending in the application, claims 1, 2, 4 and 11-14 having been previously canceled. Claims 5, 6, 7, 10, 16, 17, 25, 29, 31 and 32 are amended herein below.

Claims 1 and 2. (Canceled)

1 3. (Previously Presented) The display apparatus according to claim 21, further comprising
2 at least one tool access hole formed through the rear cover for permitting a tool to be inserted
3 through the rear cover to disengage the coupling and the rib.

Claim 4. (Canceled)

1 5. (Currently Amended) The display apparatus according to claim 21, further comprising at
2 least a pair of stops protruding from [[said]] a rear surface of the bezel to engage the panel support
3 and prevent the panel support from moving across a plane of the panel.

1 6. (Currently Amended) The display apparatus according to claim 21, further comprising at
2 least four stops disposed to be adjacent to four corner portions of [[the]] a rear surface of the bezel,
3 and protrude from said rear surface of the bezel to engage the panel support and prevent the panel
4 support from moving across a plane of the panel.

1 7. (Currently Amended) The a display apparatus according to claim 6, wherein a hook is
2 formed at [[the]] a leading edge of each stop for engaging an edge of the panel support.

1 8. (Previously Presented) The display apparatus according to claim 7, further comprising a
2 plurality of support ribs protruding from the rear cover so as to be contacted with each stop to force
3 the hook of each stop toward the edge of the panel support to support the engagement of the hook
4 and the edge of the panel support.

1 9. (Original) The display apparatus according to claim 7, wherein the edge of the panel
2 support is formed with a projection allowing the hook of each stop to overlap the projection to
3 support the engagement of the hook and the edge of the panel support.

1 10. (Currently Amended) The display apparatus according to claim 21, further comprising
2 a skirt of the bezel having a rabbetted edge and a skirt of the rear cover having a rabbetted edge that
3 overlap when said ~~front cover~~ bezel and said rear cover are coupled together.

Claims 11 through 14. (Canceled)

1 15. (Previously Presented) The display apparatus according to claim 27, further comprising
2 at least a pair of stops protruding from an inner surface of the bezel to engage the panel, to prevent
3 the panel from moving.

1 16. (Currently Amended) The display apparatus according to claim 27, further comprising
2 at least four stops disposed to be adjacent to four corner portions of a rear surface of the bezel, and
3 protrude from said inner surface of the bezel to engage the panel and prevent the panel from moving.

1 17. (Currently Amended) The a display apparatus according to claim 16, wherein a hook is
2 formed at [[the]] a leading edge of each stop for engaging an edge of the panel.

1 18. (Previously Presented) The display apparatus according to any one of claim 17, further
2 comprising a plurality of support ribs protruding from the rear cover so as to contact each stop to
3 force the hook of each stop toward the edge of the panel to support the engagement of the hook and
4 the edge of the panel.

1 19. (Previously Presented) The display apparatus according to claim 17, wherein the edge
2 of the panel is formed with a projection allowing the hook of each stop to overlap the projection to
3 support the engagement of the hook and the edge of the panel.

1 20. (Previously Presented) The display apparatus according to claim 27, further comprising
2 a skirt of the rear cover having a rabbetted edge and a skirt of said bezel having a rabbetted edge that
3 overlap when said bezel and said rear cover are coupled together.

1 21. (Previously Presented) A display apparatus, comprising:
2 a panel bearing a screen disposed to display varying visual images;

3 a panel support holding the panel;
4 a bezel framing a front periphery of the panel;
5 a rear cover removably mating with said bezel while encasing said panel held by said panel
6 support;
7 at least one rib formed to extend from a peripheral surface of a first one of the bezel and the
8 rear cover; and
9 at least one deformable coupling bearing a groove, extending from an inner surface of a
10 different one of the bezel and the rear cover, oriented to embrace a correspond rib during said
11 mating.

1 22. (Previously Presented) The display apparatus of claim 21, comprised of:
2 one said rib disposed at each corner portion of the rear cover; and
3 a corresponding said coupling disposed at each corner portion of the bezel.

1 23. (Previously Presented) The display apparatus of claim 21, comprised of:
2 one said coupling disposed at each corner portion of the rear cover; and
3 a corresponding said rib disposed at each corner portion of the bezel.

1 24. (Previously Presented) The display apparatus of claim 21, comprised of:
2 at least one stop extending from an inner surface of said bezel engaging said support while
3 maintaining said bezel surrounding said screen.

1 25. (Currently Amended) A display apparatus, comprising:
2 a panel bearing a screen disposed to display varying visual images;
3 a bezel framing a front periphery of the panel;
4 a rear cover removably mating with said bezel while encasing said panel;
5 at least one rib formed to extend from a peripheral surface of a first one of the bezel and the
6 rear cover; and
7 at least one deformable coupling bearing a groove, extending from an inner surface of a
8 different one of the bezel and the rear cover, oriented to embrace a corresponding rib during said
9 mating.

1 26. (Previously Presented) The display apparatus of claim 25, comprised of:
2 one said rib disposed at each corner portion of the rear cover; and
3 a corresponding said coupling disposed at each corner portion of the bezel.

1 27. (Previously Presented) The display apparatus of claim 25, comprised of:
2 one said coupling disposed at each corner portion of the rear cover; and
3 a corresponding said rib disposed at each corner portion of the bezel.

1 28. (Previously Presented) The display apparatus of claim 25, comprised of:
2 at least one stop extending from an inner surface of said bezel engaging said panel while
3 maintaining said bezel against said screen.

1 29. (Currently Amended) A display assembly, comprising:
2 positioning a bezel to frame a front periphery of a panel bearing a screen disposed to display
3 varying visual images;
4 aligning at least one rib formed to extend from a peripheral surface of a first one of the bezel
5 and ~~[[the]]~~ a rear cover to engage a groove borne by at least one deformable coupling extending from
6 an inner surface of a different one of the bezel and the rear cover; and
7 encasing the panel between the bezel and the rear cover when removably mating the bezel
8 with the rear cover by moving the bezel and rear cover together until the groove embraces said rib.

1 30. (Previously Presented) The display assembly of claim 29, comprised of:
2 positioning one said rib at each corner portion of the rear cover; and
3 positioning a corresponding said coupling at each corner portion of the bezel.

1 31. (Currently Amended) The display assembly of claim ~~[[27]]~~ 29, comprised of:
2 positioning one said coupling at each corner portion of the rear cover; and
3 positioning a corresponding said rib at each corner portion of the bezel.

1 32. (Currently Amended) The display assembly of claim ~~[[27]]~~ 29, comprised of:
2 forming at least one stop extending from an inner surface of said bezel engaging said panel
3 while maintaining said bezel against said screen.
